International Patent Classification (IPC) or na	tional classification and IPC				
Applicant FASALEX GMBH					
	minary examination report, established by the applicant according to Article 36.	is International Preliminary Examining Authority			
2. This REPORT consists of a total of	6 sheets, include	ding this cover sheet.			
3. This report is also accompanied by A	ANNEXES, comprising:				
a. (sent to the applicant an	d to the International Bureau) a total of3	sheets, as follows:			
sheets of the descri	sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative				
sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.					
b. (sent to the Internationa					
,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,		.,,			
	, containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).				
4. This report contains indications relat	ing to the following items:				
Box No. I Basis of th	e report				
Box No. II Priority					
Box No. III Non-estab	lishment of opinion with regard to novelty, inv	entive step and industrial applicability			
Box No. IV Lack of un	ity of invention				
	Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement				
Box No. VI Certain do	Box No. VI Certain documents cited				
Box No. VII Certain de	Box No. VII Certain defects in the international application				
Box No. VIII Certain ob	Box No. VIII Certain observations on the international application				
Date of submission of the demand Date of completion of this report

also act as thermal and/or UV stabilisers and antioxidising agents (because of the double bonds). The wood fibres in D2 contain at least two water-binding biopolymers: lignin and cellulose. The foils of D3 were naturally produced under pressure (i.e. atmospheric pressure). Pressures higher than atmospheric pressure are generally designated by the clear term of overpressure (PCT Article 6). With regard to the teaching of D4, it should be noted that the mouldings would automatically possess the water contents according to the application because of the influence of the normal ambient humidity.

BOX I

The amendments submitted with the letter of 7 June 2005 introduce substantive matter which goes beyond the original disclosure in the international application as filed, thereby contravening PCT Article 34(2)(b). This concerns the following amendments:

- 1. The inclusion in claim 1 of the application of the phrase, "'immediately after its production', it has a water content of..." Neither the application in general nor the examples in the application contain any indication of the moment when the humidity content of the moulding is determined. On page 3, paragraph 3, of the application, it is stated that the mouldings according to the application must always have (not only immediately after their production) a water content of more than 8.0% by weight. Moreover, this added feature represents a process feature rather than a product feature, since mouldings made of fibrous materials of plant or animal origin tend to absorb humidity from the ambient air up to a point of equilibrium, which generally lies over 8.0% by weight. Thus it appears to be impossible to determine in a clearcut manner what was the water content of any moulding made of fibrous materials of plant or animal origin immediately after its production.
- 2. The inclusion of the plastic materials mentioned in the original claim 4 in claims 1 and 9 of the application, without the associated quantity indications; see also page 4, paragraph 2, of the application.
